

Copy template from here ([link](#))

After completing this step you'll get a few app error issues. That's simply because you'll need to copy a database type over from our app to yours as well. Go back to our template and click on the "database" icon in the left sidebar. Then with the "data type" tab selected, find the "Watched Stock" data type and then hover over it and right click. Then click on "copy". Now, back in your own app, go to your database by clicking on the database tab. Again, with the data type tab selected hover right click on any data type you have in your database and right click. Next, click on "paste" and the "Watched Stock" data type will be added to your application as well!

That's it!
